

CodingWise Advantage

Land your dream data job with
1:1 placement support and guaranteed interviews.

INTRODUCING

Masters in Data Analytics + GenAI

This isn't another theory-heavy certification. This is job focused, live mentorship, real-world projects, 1:1 placement support, and guaranteed interview calls with 800+ hiring partners.

Your Journey Ahead

Key Steps to Get Hired Faster

Learn What Others Don't

Master in-demand tools + GenAI with live, job-focused training.

Train Like You're Already Hired

Mock interviews, resume builds, and 1:1 placement mentorship weekly.

Get Direct Interview Access

Skip job portals. Get 3+ interviews via our 800+ hiring partners.

Build Projects That Speak for You

Create capstones recruiters can't ignore - guided by industry mentors.

Python Curriculum

MODULE - 1

Python Basics

- ✓ Setup Python and VSCode.
- ✓ Introduction to programming and Python.
- ✓ Understanding variables and data types in Python.
- ✓ Operators in Python and their types.
- ✓ Arithmetic operators with practice exercises.
- ✓ Assignment, comparison, and logical operators.

MODULE - 2

Flow Control

- ✓ Introduction to flow control: if, if-else.
- ✓ Ladder if-else and nested if-else.
- ✓ Practice exercise on flow control.
- ✓ Introduction to while loops.
- ✓ Practice exercise on while loops.
- ✓ Introduction to for loops and their variations (for-in, for-range, for-zip).
- ✓ Practice exercise on for loops.
- ✓ Break and continue statements in Python.
- ✓ Nested loops:
 - Find prime numbers between 1 to 100.
 - Find palindrome numbers between 1 to 1000.

MODULE - 3

Patterns

- ✓ Understanding patterns in Python.
- ✓ Star, numeric, and hollow patterns (triangle, square).

MODULE - 4

Functions

- ✓ Introduction to functions, their types, and return statements.
- ✓ Functions with and without parameters and return statements.
- ✓ Lambda functions and practice exercises.
- ✓ Introduction to recursion and types:
 - Linear recursion.
 - Tree recursion.
- ✓ Practice linear recursion with and without backtracking.
- ✓ Practice tree recursion with and without backtracking.

MODULE - 5

Data Structures

- ✔ Introduction to lists in Python.
- ✔ List methods and list comprehension.
- ✔ Practice exercises on lists.
- ✔ List operations: addition, deletion, reversing, searching (linear and binary), and rotations.
- ✔ Introduction to 2D lists and matrix operations (addition, subtraction, multiplication).
- ✔ Special operators: is, is not, in, not in.
- ✔ Memory layout in Python.

MODULE - 6

Strings

- ✔ Introduction to strings and their methods.
- ✔ String exercises, including:
 - Reverse a string.
 - Check if a string is a palindrome.
 - Count occurrences of characters.
 - Check for anagrams.
 - Find all permutations.
 - Remove duplicate characters.
 - Find first non-repeating character.
 - Count vowels and consonants.
 - Replace substrings.
 - Split and join strings, and more.

MODULE - 7

Dictionaries

- ✔ Introduction to dictionaries and their methods.
- ✔ Dictionary comprehension and iteration techniques.
- ✔ Practice exercises on dictionaries, including JSON parsing with APIs like fakestoreapi.com.

MODULE - 8

Advanced Data Structures

- ✔ Understanding `*args` and `**kwargs`.
- ✔ Introduction to tuples and their methods.
- ✔ Introduction to sets and their methods.

MODULE - 9

Object-Oriented Programming

- ✓ Basics of OOP: classes and objects.
- ✓ Creating classes, objects, constructors, instance variables, and methods. 42.
- ✓ Features of OOP:
 - Inheritance.
 - Encapsulation.
 - Data abstraction.
 - Polymorphism.
- ✓ Types of inheritance:
 - Single, multilevel, multiple, hierarchical, and hybrid inheritance.
- ✓ Polymorphism and encapsulation.
- ✓ Data abstraction using abstract classes and the abc module.

MODULE - 10

Exception Handling

- ✓ Difference between exceptions and errors.
- ✓ Using try-except blocks with specific and generic exceptions.
- ✓ Else and finally blocks, and creating user-defined exceptions.

MODULE - 11

Multithreading

- ✓ Introduction to threads and their lifecycle.
- ✓ Performing multithreading using functions and classes.

MODULE - 12

File Handling

- ✓ File operations:
 - Read (r, r+).
 - Write (w, w+).
 - Append (a, a+).
- ✓ Exercises on file handling:
 - Search and replace text in a file.
 - Count words and vowels.
 - Check if a file exists.
 - List files in a directory.
 - Create multiple directories and files.
 - Copy content between files.

MODULE - 13

Advanced Modules

- ✓ Introduction to the os module and its methods.
- ✓ Practice questions using the os module.
- ✓ Date-time module in Python.
- ✓ requests module: Fetch random APIs with the random module.

Python Libraries Curriculum

NUMPY CURRICULUM

1. Introduction To NumPy

- ✓ Importing NumPy.
- ✓ Benefits of NumPy over Python Lists.
- ✓ Homogeneity of data.
- ✓ Speed and efficiency with NumPy (written in C).

2. Creating And Understanding Arrays

- ✓ Creating arrays using `np.array`.
- ✓ Type conversion (`astype`, `dtype`).
- ✓ Array properties:
 - Dimensions (`ndim`).
 - Shape (`shape`).
 - Size (`size`).

3. Indexing And Slicing

- ✓ Basic indexing.
- ✓ Negative indexing.
- ✓ Slicing arrays.
- ✓ Fancy indexing using lists and masks.
- ✓ Boolean indexing and masking.

4. Working With 2D Arrays (Matrices)

- ✓ Creating 2D arrays.
- ✓ Indexing and slicing in 2D arrays.
- ✓ Transpose of matrices.
- ✓ Extracting rows, columns, and diagonals.

5. Array Operations

- ✓ Element-wise operations.
- ✓ Aggregate functions (`np.sum`, `np.mean`, `np.min`, `np.max`).
- ✓ Axis-based operations.
- ✓ Logical operations (`np.any`, `np.all`).
- ✓ Conditional selection using `np.where`.

6. Array Reshaping

- ✓ Reshaping arrays (`reshape`).
- ✓ Flattening arrays (`ravel`, `flatten`).
- ✓ Expanding dimensions (`expand_dims`, `squeeze`)

7. Broadcasting

- ✓ Understanding broadcasting rules
- ✓ Using broadcasting for efficient computation.

8. Sorting And Searching

- ✔ Sorting arrays using `np.sort`.
- ✔ Sorting along specific axes.
- ✔ Searching with conditions using `np.where`.

9. Copying And Views

- ✔ Shallow copy vs Deep copy.
- ✔ Using `.view()` for shallow copies.
- ✔ Using `.copy()` for deep copies.
- ✔ Memory sharing with `np.shares_memory`.

10. Random Number Generation

- ✔ Generating random numbers using `np.random`.
- ✔ Setting seeds for reproducibility using `np.random.seed`.

11. Linear Algebra Operations

- ✔ Matrix multiplication (`np.dot`, `@` operator, `np.matmul`).
- ✔ Element-wise multiplication.
- ✔ Matrix transpose.
- ✔ Determinants and Eigenvalues.
- ✔ Solving linear systems.

12. Advanced Array Manipulations

- ✔ Splitting arrays (`split`, `hsplit`, `vsplit`).
- ✔ Stacking arrays (`hstack`, `vstack`, `concatenate`).
- ✔ Tiling and repeating arrays (`np.tile`, `np.repeat`).

13. File I/O Operations

- ✔ Loading data from text files using `np.loadtxt`.
- ✔ Saving arrays to files using `np.save`.
- ✔ Loading arrays using `np.load`.

14. Statistical Functions

- ✔ Mean, Median, Variance, Standard deviation.
- ✔ Correlation (`np.corrcoef`).
- ✔ Covariance (`np.cov`).
- ✔ Percentiles and quantiles.

15. Use Cases And Applications

- ✔ Fitness data analysis.
- ✔ Net Promoter Score (NPS) analysis.

16. Miscellaneous Topics With Case Study

- ✔ Handling errors and debugging.
- ✔ ● Using NumPy for data preprocessing.
- ✔ ● Exploratory Data Analysis (EDA).

PANDAS CURRICULUM

1. Introduction To Pandas

- ✓ Installation of Pandas.
- ✓ Importing Pandas.
- ✓ Why use Pandas?
- ✓ Difference from NumPy.
- ✓ Introduction to DataFrames and Series.

2. DataFrame Operations

- ✓ Basic operations on DataFrames.
- ✓ Common methods: `df.info()`, `df.head()`, `df.tail()`, `df.shape`.
- ✓ Creating DataFrames from scratch.

3. Column Operations

- ✓ Accessing columns.
- ✓ Checking unique values in a column.
- ✓ Renaming columns.
- ✓ Deleting columns.
- ✓ Creating new columns.

4. Row Operations

- ✓ Implicit and explicit indexing.
- ✓ Working with `df.index`.
- ✓ Indexing and slicing in Series.
- ✓ Using `loc` and `iloc` for row selection.

5. Working With Rows And Columns Together

- ✓ Appending rows.
- ✓ Sorting data.
- ✓ Concatenation.
- ✓ Merge and Join operations.

6. Data Selection And Filtering

- ✓ Selecting data using conditions.
- ✓ Boolean indexing.
- ✓ Filtering data with masks.

7. Grouping And Aggregation

- ✓ Using `groupby()`.
- ✓ Group-based aggregates.
- ✓ Group-based filtering.
- ✓ Applying custom functions with group-based operations.

8. Data Restructuring

- ✔ Multi-indexing.
- ✔ Restructuring data with `pd.melt`.
- ✔ Using `pd.pivot` and `pd.pivot_table`.
- ✔ Binning data with `pd.cut`.

9. Handling Missing Values

- ✔ Understanding `None` and `NaN` values.
- ✔ Identifying missing values with `isna()` and `isnull()`.
- ✔ Dropping missing values.
- ✔ Filling missing values.

10. String Methods In Pandas

- ✔ Handling text data.
- ✔ Performing string operations on columns.

11. Datetime Operations

- ✔ Working with datetime objects.
- ✔ Extracting date and time components.
- ✔ Performing time series analysis.

12. File I/O Operations

- ✔ Reading CSV files.
- ✔ Writing to CSV files.
- ✔ Exporting data in various formats.

13. Apply Function

- ✔ Using `apply()` on DataFrames.
- ✔ Row-wise and column-wise operations.
- ✔ Applying custom functions with `apply()`.

14. Advanced Grouping Techniques

- ✔ Multi-level aggregation.
- ✔ Using `aggregate()` with multiple columns.
- ✔ Calculating active years and productivity analysis.

15. Data Visualization And Insights

- ✔ Visualizing grouped data.
- ✔ Drawing insights from aggregated data.

CASE STUDIES

1. McKinsey Dataset Analysis

- ✓ Analyzing GDP per capita vs Life Expectancy.
- ✓ Filtering and grouping data.
- ✓ Drawing insights for business decisions.

2. IMDB Movie Business Use-Case

- ✓ Analyzing movie data.
- ✓ Merging datasets.
- ✓ Exploring movie budgets, revenues, and ratings.

3. Director Productivity Analysis

- ✓ Evaluating directors based on active years and movie release rate.
- ✓ Using multi-indexing and grouping techniques.

4. Pfizer Drug Stability Monitoring

- ✓ Monitoring drug stability using temperature and pressure data.
- ✓ Handling time-series data.
- ✓ Restructuring data using `pd.melt` and `pd.pivot`.

MATPLOTLIB AND SEABORN CURRICULUM

1. Introduction To Data Visualization

- ✔ Uses of Matplotlib.
- ✔ Introduction to Seaborn.
- ✔ Difference between Matplotlib and Seaborn.
- ✔ Exploratory vs. Explanatory Data Visualization.

2. Anatomy Of A Plot

- ✔ Figure.
- ✔ Axes.
- ✔ Axis.
- ✔ Labels.
- ✔ Ticks.
- ✔ Legends.
- ✔ Titles.

3. Types Of Data Visualization

- ✔ Univariate Analysis.
- ✔ Bivariate Analysis.
- ✔ Multivariate Analysis.

4. Univariate Data Visualization

- ✔ Categorical Data:
 - Bar Chart.
 - Countplot.
 - Pie Chart.
- ✔ Continuous Data:
 - Histogram.
 - KDE Plot.
 - Box Plot.

5. Bivariate Data Visualization

- ✔ Continuous-Continuous:
 - Line Plot.
 - Scatter Plot.
- ✔ Categorical-Categorical:
 - Dodged Countplot.
 - Stacked Countplot.
- ✔ Continuous-Categorical:
 - Box Plots.

6. Multivariate Data Visualization

- ✔ CCN: Continuous-Continuous-Categorical.
- ✔ CNN: Continuous-Numerical-Numerical.
- ✔ NNN: Numerical-Numerical-Numerical.

7. Advanced Plotting Techniques

- ✔ Joint Plot.
- ✔ Pair Plot.
- ✔ Heatmap.
- ✔ Correlation Analysis.

8. Styling And Customization

- ✔ Plot Titles, Labels, and Ticks.
- ✔ Legends and Color Customization.
- ✔ Adding Grids.
- ✔ Highlighting Points.

9. Subplots And Dashboards

- ✔ Using `plt.subplots()`.
- ✔ Creating dashboards.
- ✔ Comparing multiple plots.

CASE STUDIES

1. Tencent Video Games Analysis

- ✔ Analyzing sales data for video games.
- ✔ Identifying trends in North America, Europe, and Japan.
- ✔ Exploring the correlation between game ranks and sales.

2. Genre And Publisher Analysis

- ✔ Analyzing top genres and publishers.
- ✔ Visualizing the distribution of games across platforms.
- ✔ Sales analysis by genre and publisher using box plots.

3. Global Sales Analysis

- ✔ Using Bubble Charts to visualize sales impact based on game rankings.
- ✔ Using Heatmaps to identify correlations among sales regions.

SQL Curriculum

1. Introduction To Databases

- ✔ Definition and purpose of a database.
- ✔ DBMS vs. file-based systems.
- ✔ Applications of DBMS.
- ✔ Advantages and disadvantages of DBMS.
- ✔ Introduction to MySQL RDBMS

2. Setting Up MySQL

- ✔ Installation and setup of MySQL Workbench and MySQL Client.

3. Data Types In MySQL

- ✔ Overview of data types used in MySQL (e.g., INT, VARCHAR, DATE).

4. MySQL Databases

- ✔ Create a database.
- ✔ Select a database.
- ✔ Show existing databases.
- ✔ Drop a database.

5. Tables And Views

- ✔ Create a table.
- ✔ Alter a table.
- ✔ Show existing tables.
- ✔ Rename a table.
- ✔ Truncate a table.
- ✔ Describe a table.
- ✔ Drop a table.
- ✔ Add/Delete columns.
- ✔ Rename columns.
- ✔ Alter full-text tables.

6. MySQL Queries

- ✔ Insert one or multiple records.
- ✔ Update records.
- ✔ Delete records.
- ✔ Select specific records.

7. MySQL Clauses

- ✔ WHERE.
- ✔ DISTINCT.
- ✔ FROM.
- ✔ ORDER BY.
- ✔ GROUP BY.
- ✔ HAVING.

8. MySQL Conditions

- ✔ AND, OR, AND OR.
- ✔ Boolean conditions.
- ✔ LIKE, IN, ANY, EXISTS.
- ✔ NOT, NOT EQUAL.
- ✔ IS NULL, IS NOT NULL.
- ✔ BETWEEN conditions.

9. MySQL Keys

- ✔ UNIQUE Key.
- ✔ PRIMARY Key.
- ✔ FOREIGN Key

10. MySQL Aggregate Functions

- ✔ COUNT().
- ✔ SUM().
- ✔ AVG().
- ✔ MIN(), MAX().
- ✔ FIRST(), LAST().

11. MySQL Joins

- ✔ INNER JOIN.
- ✔ LEFT JOIN.
- ✔ RIGHT JOIN.
- ✔ CROSS JOIN.
- ✔ SELF JOIN.
- ✔ DELETE JOIN.
- ✔ UPDATE JOIN.
- ✔ LEFT JOIN vs. RIGHT JOIN.

12. Advanced SQL Features

- ✔ Filtering and subqueries.
- ✔ GROUP BY and aggregation.
- ✔ Window functions.
- ✔ Advanced constructs.
- ✔ Date & time functions.
- ✔ String manipulation in SQL.
- ✔ Data transformation and cleaning.
- ✔ Advanced filtering techniques.

13. Projects Using MySQL With SQLAlchemy

- ✔ Project 1 (By Instructor): Example - Student Management System.
- ✔ Project 2 (By Students): Example - Library Management System.

Data Visualization Curriculum

POWER BI CURRICULUM

1. Introduction To Power BI

- ✔ What is Power BI?
- ✔ Importance of Power BI in data analytics.
- ✔ Overview of the Power BI ecosystem.
- ✔ Power BI Service vs. Power BI Desktop.

2. Getting Started With Power BI Desktop

- ✔ Installing Power BI Desktop.
- ✔ Navigating the interface.
- ✔ Understanding Reports, Data, and Model views.

3. Connecting To Data Sources

- ✔ Importing data from:
 - Excel.
 - CSV.
 - SQL databases.
 - APIs.
 - Web.
- ✔ Connecting to cloud services like Azure and Google BigQuery

4. Data Cleaning And Transformation With Power Query

- ✔ Using Power Query Editor.
- ✔ Handling missing values.
- ✔ Data types and conversions.
- ✔ Removing duplicates.
- ✔ Filtering and sorting data

5. Data Modeling

- ✔ Creating relationships between tables.
- ✔ Understanding Star and Snowflake schemas.
- ✔ Data normalization and denormalization.
- ✔ Building calculated columns and measures.

6. Data Analysis Expressions (DAX)

- ✔ Introduction to DAX.
- ✔ DAX functions:
 - SUM, AVERAGE, COUNT, CALCULATE.
- ✔ Calculated columns vs. measures.
- ✔ Time intelligence functions.
- ✔ DAX queries for advanced calculations.

7. Creating Visualizations

- ✔ Bar charts, Line charts, and Pie charts.
- ✔ Treemaps, Tables, and Matrices.
- ✔ Using custom visuals.
- ✔ Conditional formatting and custom tooltips.

8. Advanced Visualizations And Interactions

- ✔ Drillthrough and Drilldown.
- ✔ Bookmarks and Tooltips.
- ✔ Slicers and filters.
- ✔ Syncing slicers across multiple pages.

9. Creating Dashboards

- ✔ Difference between reports and dashboards.
- ✔ Pinning visuals to dashboards.
- ✔ Real-time dashboards.
- ✔ Using Q&A to interact with dashboards.

10. Publishing And Sharing Reports

- ✔ Publishing to Power BI Service.
- ✔ Creating apps.
- ✔ Sharing reports and dashboards.
- ✔ Exporting reports to PDF, PowerPoint, and Excel.

CASE STUDIES AND REAL-WORLD APPLICATIONS

1. Case Study: Sales Performance Analysis

- ✔ Analyzing regional and product-level sales trends.
- ✔ Visualizing KPIs with dashboards.

2. Case Study: Financial Reporting

- ✔ Preparing financial statements.
- ✔ Tracking expenses, revenue, and profitability over time

3. Case Study: Marketing Campaign Analysis

- ✔ Monitoring campaign performance metrics.
- ✔ Evaluating ROI and customer acquisition trends

GOOGLE DATA STUDIO CURRICULUM

1. Introduction To Google Data Studio

- ✔ Overview of data visualization concepts.
- ✔ Setting up a Google Data Studio account.
- ✔ Understanding the interface

2. Data Import & Preparation

- ✔ Connecting to data sources.
- ✔ Importing data.
- ✔ Data cleaning, filtering, and formatting.

3. Basic Charts & Visualizations

- ✔ Bar charts, Line charts, and Pie charts.
- ✔ Tables and Scorecards.
- ✔ Customizing charts.

4. Data Blending & Combining Data Sources

- ✔ Data blending.
- ✔ Merging data.
- ✔ Left and Inner Joins.

5. Calculated Fields & Formulas

- ✔ Creating calculated fields.
- ✔ Using formulas:
 - IF, CASE, REGEXP, DATE_DIFF.

6. Filters, Controls, & Parameters

- ✔ Applying filters.
- ✔ Interactive controls:
 - Date range, dropdown, and checkbox.

7. Building Interactive Dashboards

- ✔ Designing dashboards.
- ✔ Drill-downs and cross-filtering.
- ✔ Best practices for interactive dashboards.

8. Data Visualization Techniques

- ✔ Heat maps, Bubble charts, Geo maps.
- ✔ Scorecards.
- ✔ Using community connectors for custom visualizations.

CAPSTONE PROJECTS

1. Sales Performance Dashboard

- ✔ Creating an end-to-end project to analyze sales performance

2. Website Traffic Analysis

- ✔ Visualizing and analyzing website traffic metrics.

ADVANCED EXCEL CURRICULUM

1. Understanding Data Types & Cell Referencing

- ✔ Understanding different data types.
- ✔ Absolute and relative references.
- ✔ Practical examples for effective referencing

2. Aggregation Functions

- ✔ Functions: SUM, MAX, MIN, COUNT, AVERAGE.
- ✔ Date functions: DATEDIF, NETWORKDAYS.

3. Logical Functions & Conditional Formatting

- ✔ Logical functions: IF, IFS, AND, OR, Nested IF.
- ✔ Conditional formatting:
 - Dynamic heat maps.
 - Data bars.

4. Data Analysis With Pivot Tables & Dashboards

- ✔ Creating pivot tables.
- ✔ Sorting, filtering, and grouping data.
- ✔ Using slicers for interactive dashboards.

5. Power Query & Power Pivot

- ✔ Data cleaning and transformation.
- ✔ Establishing relationships between data.
- ✔ Creating data models for analysis.

6. Advanced Lookup Functions

- ✔ Using VLOOKUP and HLOOKUP.
- ✔ Advanced functions: INDEX, MATCH, OFFSET, INDIRECT.

7. What-If Analysis & Optimization Tools

- ✔ Tools for scenario analysis:
 - Goal Seek.
 - Solver.
 - Scenario Manager.

8. Practical Applications

- ✔ Case studies for real-world scenarios.
- ✔ Building comprehensive Excel dashboards.

Machine Learning Curriculum

1. Linear Algebra Basics

- ✔ Dot Products and Hyperplanes.
- ✔ Halfspaces and Distances.
- ✔ Loss Minimization in Classification.
- ✔ Principal Component Analysis (PCA).

2. Optimization Techniques

- ✔ Gradient Descent.
- ✔ Constrained Optimization.
- ✔ Understanding the need for Calculus in ML.
- ✔ Using Optimization for model training.

3. Linear Regression

- ✔ Simple Linear Regression.
- ✔ Multiple Linear Regression.
- ✔ Understanding the Regression Equation.
- ✔ Handling Assumptions.
- ✔ Evaluating Model Performance using R^2 and Adjusted R^2 .

4. Logistic Regression For Classification

- ✔ Binary Classification using Logistic Regression.
- ✔ Multi-class Classification.
- ✔ Interpretation of Results.
- ✔ Confusion Matrix.
- ✔ AUC-ROC Curve.

5. Regularization Techniques

- ✔ Lasso (L1) and Ridge (L2) Regression.
- ✔ Reducing Model Complexity.
- ✔ Handling Overfitting.

6. Bias-Variance Tradeoff

- ✔ Understanding Bias and Variance.
- ✔ Their impact on Model Performance.
- ✔ Techniques to handle Overfitting and Underfitting.

7. Classification Metrics

- ✔ Accuracy, Precision, Recall, and F1-score.
- ✔ Confusion Matrix.
- ✔ AUC-ROC Curve.

8. Feature Engineering And Model Tuning

- ✔ Feature Selection Techniques.
- ✔ Cross-Validation.
- ✔ Hyperparameter Tuning using Grid Search.

CASE STUDIES AND BUSINESS APPLICATIONS

1. Analyzing Business Cases Such As Apollo, Delhivery, And Jamboree.

2. Implementing Machine Learning Solutions To Real-World Problems.

Basic Mathematical Concepts Curriculum

ALGEBRA & DISCRETE MATHEMATICS CURRICULUM

1. Algebra

- ✓ Understanding algebraic expressions and equations.
- ✓ Solving linear equations and systems of equations.
- ✓ Working with exponents and logarithms:
 - Laws of exponents.
 - Properties of logarithms.
 - Solving logarithmic equations.

2. Discrete Mathematics Fundamentals

- ✓ Introduction to set theory:
 - Unions, intersections, subsets, and complements.
- ✓ Permutations and combinations:
 - Factorial notation.
 - Calculating permutations and combinations.

3. Probability Basics

- ✓ Key concepts: Experiment, outcome, event, sample space.
- ✓ Calculating simple probabilities.
- ✓ Rules of probability:
 - Addition and multiplication rules.
 - Independent and dependent events.
- ✓ Conditional probability and Bayes' theorem.

4. Descriptive Statistics

- ✓ Measures of central tendency:
 - Mean, Median, Mode.
- ✓ Measures of dispersion:
 - Range, Variance, Standard deviation, Interquartile range (IQR).
- ✓ Understanding skewness and kurtosis.

5. Data Visualization

- ✓ Visual representation of data:
 - Histograms, Bar charts, Line charts.
 - Box plots for outliers.
 - Scatter plots for relationships between variables.

6. Probability Distributions

- ✓ Normal distribution: Bell curve and standard normal distribution.
- ✓ Binomial distribution.
- ✓ Poisson distribution for rare events.
- ✓ Z-scores and standardization.

7. Sampling & Sampling Distributions

- ✓ Understanding sampling methods:
 - Random, Stratified, Systematic sampling.
- ✓ Central Limit Theorem (CLT).
- ✓ Confidence intervals for estimating population parameters.

8. Correlation Analysis

- ✓ Understanding correlation coefficients:
 - Pearson correlation.
 - Spearman rank correlation
- ✓ Interpreting correlation strength and direction.

9. Regression Analysis

- ✓ Simple linear regression:
 - Regression equation ($Y = mx + c$).
 - Interpreting slope and intercept.
 - Coefficient of determination (R^2).
- ✓ Multiple linear regression:
 - Handling multiple predictor variables.
 - Evaluating model performance using adjusted R^2

10. Statistical Inference & Hypothesis Testing

- ✓ Formulating null and alternative hypotheses.
- ✓ Types of errors:
 - Type I and Type II.
- ✓ Understanding p-values and significance levels.
- ✓ Hypothesis tests:
 - T-tests.
 - Chi-square tests.
 - ANOVA.

Weekly Projects

Build real confidence, not just watch videos.
Every week, solve real-world tasks recruiters actually
ask about so you never blank out in interviews again.

Capstone

Work on a project you can proudly present.
Craft a full-scale, end-to-end project with live
guidance, designed to showcase your data skills to
hiring managers - no more “copy-paste” portfolios.

Top 8 Projects

Stand out with proof, not promises.
We handpick 8 high-impact projects (across Finance,
Retail, GenAI, and more) that scream job-readiness
because skill is the new degree.
