

1. Write a program to input a number and check whether it is even or odd.
2. Create a list:

```
fruits = ["Apple", "Banana", "Mango", "Orange"]
```

Perform the following:

- Add "Grapes".
 - Remove "Banana".
 - Display the first and last element.
3. Write a function that accepts three numbers and returns the smallest number.
 4. Create a dictionary:

```
student = {  
    "Name": "Alex",  
    "Age": 20,  
    "Course": "Python"  
}
```

Add a new key called "City" and update the student's age.

5. Write a program to print the multiplication table of a number entered by the user.
6. Create two sets:

```
A = {10, 20, 30, 40}  
B = {30, 40, 50, 60}
```

Find the common elements and all unique elements.

7. Create a tuple:

```
colors = ("Red", "Blue", "Green", "Yellow")
```

Display the third element and find the index of "Green".

8. Create the following dictionary:

```
courses = {  
    "Amit": ["Python", "Java"],  
    "Riya": ["C", "Python"],  
    "Rahul": ["Java", "Web"]  
}
```

- Add one new course for Aman.
- Remove "C" from Riya's course list.
- Display Rahul's courses.

9. Create a class named `Rectangle` with attributes `length` and `width`. Create a method to calculate and display the area of the rectangle.
10. Write a program to find the sum of all odd numbers from 1 to 100 using a loop.
