Assignment No - 01

1) Number is odd or even.

→ `n = int(input("Enter a number"))`

`if n % 2 == 0 :`

`print(" ", n, " is the even")`

`else :`

`print(" ", n, " is the odd")`

2) Create list.

`fruits = ["Apple", "Banana",
"Mango", "Orange"]`

→ `fruits = ["Apple", "Banana", "Mango",
"Orange"]`

`fruits.append("Grapes")`

`fruits.remove("Banana")`

`for`

`print("First element: ", fruits[0])`

`print("Last element: ", fruits [
len(fruits)-1])`

3) Write function that accepts three numbers and returns smallest.

```
→ def smallest_three(n1, n2, n3):  
    return min(n1, n2, n3)
```

```
print("Smallest = ", smallest_three(10, -20, 30))
```

4) Create Dictionary - Student = {
 "Name": "Alex",
 "Age": 20,
 "Course": "Python"

```
→ student = { "Name": "Alex",  
    "Age": 20,  
    "Course": "Python"
```

```
student["city"] = "Kurundwad"
```

```
student["Age"] = 18
```

```
print("Dictionary = ", student)
```

5) multiplication table of number entered by user

→ `n = int(input("Enter number: "))`

`for i in range(1, n, 1):`

`print(" ", i * n, end=" ")`

6) Create two sets

`A = {10, 20, 30, 40}`

`B = {30, 40, 50, 60}`

find common and unique element.

→ `A = {10, 20, 30, 40}`

`B = {30, 40, 50, 60}`

`print("common elements = ", A & B)`

`print("Unique elements = ", A | B)`

7) Create tuple

`colors = ("Red", "Blue",
"Green", "Yellow")`

Display the third element and index of "Green".

→ color = ("Red ", "Blue ", "Green",
"Yellow")

print("Third element = ", color[2])

print("'Green' index = ", colors.index
"Green"))

8) Create dictionary -

course = {

"Amit": ["Python", "Java"],

"Riya": ["C", "Python"],

"Rahul": ["Java", "Web"]

}

→ courses = {
"Amit": ["Python", "Java"],
"Riya": ["C", "Python"],
"Rahul": ["Java", "Web"]

courses["Amit"].append("Data Science")

courses["Riya"].remove("C")

print("Rahul courses = ", courses
["Rahul"])

9) Find rectangle Area using class

→ class Rectangle:

def __init__(self, l, b):

self.l = l

self.b = b

def cal(self):

self.area = l * b

def display(self):

print("Area = ", self.area)

r1 = Rectangle(10, 20)

r1.cal()

r1.display()

10) Write to find sum of all odd number from 1 to 100.

→ sum = 0

for i in range(1, 100, 2):

sum += i

print("Sum = ", sum)
